

STANDARD- SIZED PARTICLES

INHALAC®

InhaLac stands for sieved crystalline lactose types designed specifically for the use in dry powder inhalers. InhaLac comes as a wide range of both standard and customised grades. Excellent flowability, well defined particle surfaces and physico-chemical stability are prerequisites for inhaler excipients. InhaLac's smooth particle surface, extremely narrow particle size distribution and the absence of amorphous lactose enable its unique performance. Take the opportunity to contact our expert team for your individual solution.

InhaLac – ideal for your DPI formulation!
